

Spare Parts Foundation Training

What is it all about?

Physical assets should not be down due to a lack of spare parts. But how do you organize your supply chain to be able to be in control? This training is all about getting the foundations in place.

As a structure we use our roadmap to discuss the essential elements for an efficient supply chain. This enables the learners to see the end picture when we are looking at the basics. With discussing the basics, we will cover topics like: Master data, Warehouse management, procedures, procurement management, inventory management and many more.

During this course we will explain all different possible ways of setting up your supply chain and point out the best practice in different scenario's.

Besides, we will touch on methods to improve certain aspects of your supply chain to the desired level. To make this understandable we will use many examples from our years of experience to make it easier applicable.

On top of this, several elements will be addressed by using actual problem cases which the learners have to solve.

This training strategy enables the participants not only to grasp the methods but also to apply these methods in their own environment.

Who should attend?

- Supply chain manager
- Stores managers
- Tactical planners
- Inventory controllers
- Logistics engineers
- Procurement managers
- Maintenance managers

Take home tools

The experience and knowledge to see how a typical supply chain will be set up here they can apply the learned techniques to:

- Set up a master data improvement project.
- Make processes better to make them leaner.
- Check if the minimal requirements are met for a proper spare parts supply chain management

Format

- Public training – scheduled at all major cities across Southern Africa
- On-site training
- Public virtual training

What makes it different?

At the end of the course the learners will be able to:

- Set up a proper master data management configuration
- Identify shortcomings in the procedures
- Know the basic requirements of warehouse management
- Know how demand and supply should be linked
- Know the basic requirements for a procurement
- Know the basic requirements for inventory management

Course outline

Subjects covered in this two-day intervention

Understand the spare parts environment

Learners are provided with an overview of the contemporary spare parts management environment. Subjects covered are:

- spare parts logistics vs. other industries
- industry specific characteristics (interactive)
- common practices for inventory management of spare parts
- conflicting roles/responsibilities in typical organisations
- the key challenge/ optimisation criterion the impact of organisational maturity levels.

Get a full walkthrough of the spare parts management roadmap

To understand the possible benefits of a proper supply chain we will show the learners what can be set up when the basics are in place. Here you can think of:

- Optimal stock performance like working capital, service level and operational costs
- Proactive forecasting
- Different supplier contracts to increase performance and lower the working capital.
- Supply chain pooling and shipment to share stock among different plants

Master data Management

In this module we will highlight the importance of master data management and the ways to set it up and improve. When we talk about master data management, we imply more than just the code and description we also touch on:

- Procurement information
- Stocking information
- Logistics information

Warehouse Management

How to set up your warehouse? How to organise it? Which performance measures are there? These questions will be covered when we touch on this subject.

Professional Procedures

To manage your supply chain, you need to make sure that all the procedures you have in place are effective and efficient. On top of that these should cover all the possible activities within the supply chain to avoid unwelcome situations during this module we will then touch on the basic processes required and a lean way of looking at procedures to improve

Harmonize Supply chain

When a reservation is placed either your stores should start issuing or a procurement process will be initiated. To make sure that this will happen we will discuss the basic set up of:

- Procurement management
- Inventory management
- Demand management

Costs

- Public Training R 7.800 per person
- Customised Training (Virtual): Please request quote
- Customised Training (Client Site): Please request quote
