

Supply Chain Engineer

Do you have a passion for solving Supply Chain challenges. Can you inspire your team members and lead by example with your practical solutions? Would you want to be part of an exciting and growing company? If so, we are looking for you!

Gordian Logistic Experts South Africa is a Dutch-rooted supply chain management consultancy company. We focus on Maintenance Repair and Operations (MRO) Spares Management. Gordian adds value by reducing asset downtime by ensuring spares availability. Gordian helps clients improve their service level, lower their working capital (inventory value), and decrease operational costs. Our approach is holistic, we do not only assess inventory levels (Min-Max calculations), but we also focus on master data management, spares categorization, stores management, procurement strategies and inventory control. Our clients have capital-intensive assets like production facilities, mining equipment, transportation fleets, etc.

What will you do as a Supply Chain Engineer?

You will enable spare optimisation for clients through facilitating and guiding their spare management practices on a periodic basis. A Supply Chain Engineer knows how to positively influence clients in an engaging manner to promote and improve spare (service) logistics. They will service clients by practically delivering Gordian's Plan-Do-Check-Act methodology in the client's environment. They work for one or more international clients for longer periods of time focusing on implementing sustainable improvements. There is a greater emphasis on routines and structure in the daily activities. Of course, supply chain engineers will be supported by fellow professionals at Gordian. In this role, engineers not only serve as an advisor but also ensure that the respective resources in the client's spare supply chain are organized, trained, and managed. It is, therefore, possible that a Supply Chain Engineer may be responsible for a variety of services, for example master data management, store management, inventory management etc. Gordian has adapted to a hybrid-working model, thus requiring employees to work from both office and home. The position will also require client visits and being active on client sites.

Requirements:

- An academic background in the field industrial engineering or similar, minimal B.Eng. (Ind) and preferred M.Eng (Ind).
- 0-3 years' working experience in logistics/engineering (e.g., supply chain analyst, consultant, buyer, inventory/MRP planner).
- Great skillset to analyse problems and experience with MS. Excel and MS. Access.
- Excellent communication & presentation skills and you are representative.
- Affinity with sales and you can translate a need into a proposition.
- Affinity with Asset Management, Logistics, ICT in general.
- Project management skills, you can drive a project team towards improvement.
- Independency and responsibility, but also act as an effective team player.

What we offer:

- You have a considerable influence on the roll out and settlement of Gordian in South Africa.
- Project delivery (data analysis, making presentations, driving improvement activities).
- Flexible working hours and personal development possibilities.
- A market related salary (R300 000 – R400 000 CTC) and the required materials to do your job (laptop and mobility budget).
- Commencement date: January 2023
- A young and dynamic team with frequent social gatherings and interactions.

Interested?

Application closing date – 30 November 2022
